Hammer

The hammer is beating the object that moves or deforms tool. The most commonly used to knock in a nail, correction or objects on. A hammer with every kind of form, the common form of a handle and a top. The top side is flat to knock, the other side is the hammer. Hammerhead shape can be like a horn, can also be a wedge, its function is to pull out a nail. In addition also has a round-headed hammer.

Machinist's hammer

Fitter hammer product details: pliers worker hammer is based on weight to distinguish by the pound, fitter hammer hammer is two-way, is always round, generally used to fight the rivet, the other is close, flat, usually used to combat the quite smooth surface. The flat end generally by tapping, end sheet metal tip with.
